

Hive Loader

HiveDirectoryLoader is a tool that scans specified directory and loads all files that match the specified filter to Hive storage. Currently it supports only one type of partitioning (year, month, day) and every source file should contain these partitioning fields in the following format yyyy-MM-dd in its name.

```
LOAD DATA INPATH '"' + path + '"' INTO TABLE " + table + " " +  
    "PARTITION (year='" + year + "', month='" + month + "', day='" + day + "')
```

TODO describe data consistency and work flow
